

U.S. Patent Application Serial No. 10/519,832  
Response filed June 23, 2009  
Reply to OA dated March 24, 2009

**CLAIMS CURRENTLY PENDING:**

**Listing of Claims:**

Claims 1-5 (canceled).

1       Claim 6 (previously presented): A frozen dessert manufacturing apparatus comprising: a cold  
2       storage which cold-stores a liquid containing bag constituted of a bag main body containing a  
3       mixture and having flexibility and an outer layer member disposed outside this bag main body,  
4       capable of forming a sealed space between the outer layer member and the bag main body, and  
5       having flexibility; a cooling cylinder which stirs and cools the mixture supplied from the liquid  
6       containing bag to thereby manufacture frozen dessert; a cooling device which cools the cold storage  
7       or the cooling cylinder; an air compression device; a mixture supply passage for connecting the  
8       inside of the bag main body of the liquid containing bag to the inside of the cooling cylinder; a bag  
9       pressurizing passage for supplying compressed air produced by the air compression device between  
10      the outer layer member and the bag main body of the liquid containing bag; an air supply passage  
11      for supplying compressed air into the cooling cylinder; and a combined passage member detachably  
12      attached to the cooling cylinder and disconnectably connected to the mixture supply passage and the  
13      air supply passage, wherein the mixture supply passage is combined with the air supply passage, and  
14      thereafter connected to the inside of the cooling cylinder by the combined passage member, and the

15 combined passage member is disposed in the cold storage.

Claim 7 (canceled).

1 Claim 8 (previously presented): The frozen dessert manufacturing apparatus according to  
2 claim 6, further comprising: check valves which are connected between the mixture supply passage  
3 and the combined passage member and between the air supply passage and the combined passage  
4 member and which are in a forward direction on the side of the combined passage member.

Claim 9 (canceled).

1 Claim 10 (previously presented): The frozen dessert manufacturing apparatus according to  
2 claim 6 or 8, wherein the mixture supply passage is disposed in the cold storage.

Claims 11-18 (canceled).
